## AP Calculus - Final Review Sheet

| When you see the words .... |  | This is what you think of doing |
| :---: | :---: | :---: |
| 1. | Find the zeros | Find roots. Set function $=0$, factor or use quadratic equation if quadratic, graph to find zeros on calculator |
| 2. | Show that $f(x)$ is even | Show that $f(-x)=f(x)$ symmetric to $y$-axis |
| 3. | Show that $f(x)$ is odd | Show that $f(-x)=-f(x)$ OR $f(x)=-f(-x)$ symmetric around the origin |
| 4. | Show that $\lim _{x \rightarrow a} f(x)$ exists | Show that $\lim _{x \rightarrow a^{-}} f(x)=\lim _{x \rightarrow a^{+}} f(x)$; exists and are equal |
| 5. | Find $\lim _{x \rightarrow a} f(x)$, calculator allowed | Use TABLE [ASK], find $y$ values for $x$-values close to a from left and right |
| 6. | Find $\lim _{x \rightarrow a} f(x)$, no calculator | Substitute $x=a$ <br> 1) limit is value if $\frac{b}{c}$, incl. $\frac{0}{c}=0 ; c \neq 0$ <br> 2) DNE for $\frac{b}{0}$ <br> 3) $\frac{0}{0}$ DO MORE WORK! <br> a) rationalize radicals <br> b) simplify complex fractions <br> c) factor/reduce <br> d) known trig limits <br> 1. $\lim _{x \rightarrow 0} \frac{\sin x}{x}=1$ <br> 2. $\lim _{x \rightarrow 0} \frac{1-\cos x}{x}=0$ <br> e) piece-wise fcn: check if $\mathrm{RH}=\mathrm{LH}$ at break |
| 7. | Find $\lim _{x \rightarrow \infty} f(x)$, calculator allowed | Use TABLE [ASK], find $y$ values for large values of x , i.e. 999999999999 |
| 8. | Find $\lim _{x \rightarrow \infty} f(x)$, no calculator | Ratios of rates of changes <br> 1) $\frac{\text { fast }}{\text { slow }}=D N E$ <br> 2) $\frac{\text { slow }}{\text { fast }}=0$ <br> 3) $\frac{\text { same }}{\text { same }}=$ ratio of coefficients |
| 9. | Find horizontal asymptotes of $f(x)$ | Find $\lim _{x \rightarrow \infty} f(x)$ and $\lim _{x \rightarrow-\infty} f(x)$ |
| 10. | Find vertical asymptotes of $f(x)$ | Find where $\lim _{x \rightarrow a^{ \pm}} f(x)= \pm \infty$ <br> 1) Factor/reduce $f(x)$ and set denominator $=0$ <br> 2) $\ln x$ has VA at $x=0$ |

| 11. | Find domain of $f(x)$ | Assume domain is $(-\infty, \infty)$. Restrictable domains: denominators $\neq 0$, square roots of only non-negative numbers, $\log$ or $\ln$ of only positive numbers, real-world constraints |
| :---: | :---: | :---: |
| 12. | Show that $f(x)$ is continuous | Show that 1) $\lim _{x \rightarrow a} f(x)$ exists $\left(\lim _{x \rightarrow a^{-}} f(x)=\lim _{x \rightarrow a^{+}} f(x)\right)$ <br> 2) $f(a)$ exists <br> 3) $\lim _{x \rightarrow a} f(x)=f(a)$ |
| 13. | Find the slope of the tangent line to $f(x)$ at $\mathrm{x}=\mathrm{a}$. | Find derivative $f^{\prime}(a)=m$ |
| 14. | Find equation of the line tangent to $f(x)$ at $(a, b)$ | $\begin{aligned} & f^{\prime}(a)=m \text { and use } y-b=m(x-a) \\ & \text { sometimes need to find } b=f(a) \end{aligned}$ |
| 15. | Find equation of the line normal (perpendicular) to $f(x)$ at $(a, b)$ | Same as above but $m=\frac{-1}{f^{\prime}(a)}$ |
| 16. | Find the average rate of change of $f(x)$ on $[a, b]$ | $\text { Find } \frac{f(b)-f(a)}{b-a}$ |
| 17. | Show that there exists a $c$ in $[a, b]$ such that $f(c)=n$ | Intermediate Value Theorem (IVT) <br> Confirm that $f(x)$ is continuous on $[a, b]$, then show that $f(a) \leq n \leq f(b)$. |
| 18. | Find the interval where $f(x)$ is increasing | Find $f^{\prime}(x)$, set both numerator and denominator to zero to find critical points, make sign chart of $f^{\prime}(x)$ and determine where $f^{\prime}(x)$ is positive. |
| 19. | Find interval where the slope of $f(x)$ is increasing | Find the derivative of $f^{\prime}(x)=f^{\prime \prime}(x)$, set both numerator and denominator to zero to find critical points, make sign chart of $f^{\prime \prime}(x)$ and determine where $f^{\prime \prime}(x)$ is positive. |
| 20. | Find instantaneous rate of change of $f(x)$ at $a$ | Find $f^{\prime}(a)$ |
| 21. | Given $s(t)$ (position function), find $v(t)$ | Find $v(t)=s^{\prime}(t)$ |
| 22. | Find $f^{\prime}(x)$ by the limit definition <br> Frequently asked backwards | $\begin{aligned} & f^{\prime}(x)=\lim _{h \rightarrow 0} \frac{f(x+h)-f(x)}{h} \text { or } \\ & f^{\prime}(a)=\lim _{x \rightarrow a} \frac{f(x)-f(a)}{x-a} \end{aligned}$ |
| 23. | Find the average velocity of a particle on $[a, b]$ | Find $\frac{1}{b-a} \int_{a}^{b} v(t) d t$ OR $\frac{s(b)-s(a)}{b-a}$ depending on if you know $v(t)$ or $s(t)$ |
| 24. | Given $v(t)$, determine if a particle is speeding up at $t=k$ | Find $v(k)$ and $a(k)$. If signs match, the particle is speeding up; if different signs, then the particle is slowing down. |
| 25. | Given a graph of $f^{\prime}(x)$, find where $f(x)$ is increasing | Determine where $f^{\prime}(x)$ is positive (above the $x$-axis.) |

| 26. | Given a table of $x$ and $f(x)$ on selected values between $a$ and $b$, estimate $f^{\prime}(c)$ where $c$ is between $a$ and $b$. | Straddle $c$, using a value, $k$, greater than $c$ and a value, $h$, less than $c$. so $f^{\prime}(c) \approx \frac{f(k)-f(h)}{k-h}$ |
| :---: | :---: | :---: |
| 27. | Given a graph of $f^{\prime}(x)$, find where $f(x)$ has a relative maximum. | Identify where $f^{\prime}(x)=0$ crosses the $x$-axis from above to below OR where $f^{\prime}(x)$ is discontinuous and jumps from above to below the $x$-axis. |
| 28. | Given a graph of $f^{\prime}(x)$, find where $f(x)$ is concave down. | Identify where $f^{\prime}(x)$ is decreasing. |
| 29. | Given a graph of $f^{\prime}(x)$, find where $f(x)$ has point(s) of inflection. | Identify where $f^{\prime}(x)$ changes from increasing to decreasing or vice versa. |
| 30. | Show that a piecewise function is differentiable at the point $a$ where the function rule splits | First, be sure that the function is continuous at $x=a$ by evaluating each function at $\mathrm{x}=\mathrm{a}$. Then take the derivative of each piece and show that $\lim _{x \rightarrow a^{-}} f^{\prime}(x)=\lim _{x \rightarrow a+} f^{\prime}(x)$ |
| 31. | Given a graph of $f(x)$ and $h(x)=f^{-1}(x)$, find $h^{\prime}(a)$ | Find the point where $a$ is the $y$-value on $f(x)$, sketch a tangent line and estimate $f^{\prime}(b)$ at the point, then $h^{\prime}(a)=\frac{1}{f^{\prime}(b)}$ |
| 32. | Given the equation for $f(x)$ and $h(x)=f^{-1}(x)$, find $h^{\prime}(a)$ | Understand that the point $(a, b)$ is on $h(x)$ so the point $(b, a)$ is on $f(x)$. So find $b$ where $f(b)=a$ $h^{\prime}(a)=\frac{1}{f^{\prime}(b)}$ |
| 33. | Given the equation for $f(x)$, find its derivative algebraically. | 1) know product/quotient/chain rules <br> 2) know derivatives of basic functions <br> a. Power Rule: polynomials, radicals, rationals <br> b. $e^{x} ; b^{x}$ <br> c. $\ln x ; \log _{b} x$ <br> d. $\sin x ; \cos x ; \tan x$ <br> e. $\arcsin x ; \arccos x ; \arctan x ; \sin ^{-1} x ;$ etc |
| 34. | Given a relation of $x$ and $y$, find $\frac{d y}{d x}$ algebraically. | Implicit Differentiation Find the derivative of each term, using product/quotient/chain appropriately, especially, chain rule: every derivative of y is multiplied by $\frac{d y}{d x}$; then group all $\frac{d y}{d x}$ terms on one side; factor out $\frac{d y}{d x}$ and solve. |
| 35. | Find the derivative of $f(g(x))$ | $\begin{aligned} & \text { Chain Rule } \\ & f^{\prime}(g(x)) \cdot g^{\prime}(x) \end{aligned}$ |

| 36. | Find the minimum value of a function on $[a, b]$ | Solve $f^{\prime}(x)=0$ or DNE, make a sign chart, find sign change from negative to positive for relative minimums and evaluate those candidates along with endpoints back into $f(x)$ and choose the smallest. NOTE: be careful to confirm that $f(x)$ exists for any x -values that make $f^{\prime}(x)$ DNE. |
| :---: | :---: | :---: |
| 37. | Find the minimum slope of a function on $[a, b]$ | Solve $f^{\prime \prime}(x)=0$ or DNE, make a sign chart, find sign change from negative to positive for relative minimums and evaluate those candidates along with endpoints back into $f^{\prime}(x)$ and choose the smallest. NOTE: be careful to confirm that $f(x)$ exists for any x -values that make $f^{\prime \prime}(x)$ DNE. |
| 38. | Find critical values | Express $f^{\prime}(x)$ as a fraction and solve for numerator and denominator each equal to zero. |
| 39. | Find the absolute maximum of $f(x)$ | Solve $f^{\prime}(x)=0$ or DNE, make a sign chart, find sign change from positive to negative for relative maximums and evaluate those candidates into $f(x)$, also find $\lim _{x \rightarrow \infty} f(x)$ and $\lim _{x \rightarrow-\infty} f(x)$; choose the largest. |
| 40. | Show that there exists a $c$ in $[a, b]$ such that $f^{\prime}(c)=0$ | Rolle's Theorem Confirm that $f$ is continuous and differentiable on the interval. Find $k$ and $j$ in $[a, b]$ such that $f(k)=f(j)$, then there is some $c$ in $[k, j]$ such that $f^{\prime}(c)=0$. |
| 41. | Show that there exists a $c$ in $[a, b]$ such that $f^{\prime}(c)=m$ | Mean Value Theorem Confirm that $f$ is continuous and differentiable on the interval. Find $k$ and $j$ in $[a, b]$ such that $m=\frac{f(k)-f(j)}{k-j}$, then there is some $c$ in $[k, j]$ such that $f^{\prime}(c)=m$. |
| 42. | Find range of $f(x)$ on $[a, b]$ | Use max/min techniques to find values at relative max/mins. Also compare $f(a)$ and $f(b)$ (endpoints) |
| 43. | Find range of $f(x)$ on $(-\infty, \infty)$ | Use max/min techniques to find values at relative max/mins. Also compare $\lim _{x \rightarrow+\infty} f(x)$. |
| 44. | Find the locations of relative extrema of $f(x)$ given both $f^{\prime}(x)$ and $f^{\prime \prime}(x)$. <br> Particularly useful for relations of x and y where finding a change in sign would be difficult. | Second Derivative Test <br> Find where $f^{\prime}(x)=0$ OR DNE then check the value of $f^{\prime \prime}(x)$ there. If $f^{\prime \prime}(x)$ is positive, $f(x)$ has a relative minimum. If $f "(x)$ is negative, $f(x)$ has a relative maximum. |

|  |  |  |
| :---: | :---: | :---: |
| 45. | Find inflection points of $f(x)$ algebraically. | Express $f^{\prime \prime}(x)$ as a fraction and set both numerator and denominator equal to zero. Make sign chart of $f^{\prime \prime}(x)$ to find where $f^{\prime \prime}(x)$ changes sign. ( + to - or - to + ) NOTE: be careful to confirm that $f(x)$ exists for any x values that make $f$ " $(x)$ DNE. |
| 46. | Show that the line $y=m x+b$ is tangent to $f(x)$ at $\left(x_{1}, y_{1}\right)$ | Two relationships are required: same slope and point of intersection. Check that $m=f^{\prime}\left(x_{1}\right)$ and that $\left(x_{1}, y_{1}\right)$ is on both $f(x)$ and the tangent line. |
| 47. | Find any horizontal tangent line(s) to $f(x)$ or a relation of $x$ and $y$. | Write $\frac{d y}{d x}$ as a fraction. Set the numerator equal to zero. NOTE: be careful to confirm that any values are on the curve. <br> Equation of tangent line is $y=b$. May have to find $b$. |
| 48. | Find any vertical tangent line(s) to $f(x)$ or a relation of $x$ and $y$. | Write $\frac{d y}{d x}$ as a fraction. Set the denominator equal to zero. <br> NOTE: be careful to confirm that any values are on the curve. <br> Equation of tangent line is $x=a$. May have to find $a$. |
| 49. | Approximate the value of $f(0.1)$ by using the tangent line to $f$ at $x=0$ | Find the equation of the tangent line to $f$ using $y-y_{1}=m\left(x-x_{1}\right)$ where $m=f^{\prime}(0)$ and the point is $(0, f(0))$. Then plug in 0.1 into this line; be sure to use an approximate $(\approx)$ sign. <br> Alternative linearization formula: $y=f^{\prime}(a)(x-a)+f(a)$ |
| 50. | Find rates of change for volume problems. | Write the volume formula. Find $\frac{d V}{d t}$. Careful about product/ chain rules. Watch positive (increasing measure)/negative (decreasing measure) signs for rates. |
| 51. | Find rates of change for Pythagorean Theorem problems. | $x^{2}+y^{2}=z^{2}$ <br> $2 x \frac{d x}{d t}+2 y \frac{d y}{d t}=2 z \frac{d z}{d t}$; can reduce 2 's <br> Watch positive (increasing distance)/negative (decreasing distance) signs for rates. |
| 52. | Find the average value of $f(x)$ on $[a, b]$ | Find $\frac{1}{b-a} \int_{a}^{b} f(x) d x$ |
| 53. | Find the average rate of change of $f(x)$ on $[a, b]$ | $\frac{f(b)-f(a)}{b-a}$ |
| 54. | Given $v(t)$, find the total distance a particle travels on $[a, b]$ | Find $\int_{a}^{b}\|v(t)\| d t$ |
| 55. | Given $v(t)$, find the change in position a particle travels on $[a, b]$ | Find $\int_{a}^{b} v(t) d t$ |

| 56. | Given $v(t)$ and initial position of a particle, find the position at $\mathrm{t}=\mathrm{a}$. | Find $\int_{0}^{a} v(t) d t+s(0)$ <br> Read carefully: starts at rest at the origin means $s(0)=0$ and $v(0)=0$ |
| :---: | :---: | :---: |
| 57. | $\frac{d}{d x} \int_{a}^{x} f(t) d t=$ | $f(x)$ |
| 58. | $\frac{d}{d x} \int_{a}^{g(x)} f(t) d t$ | $f(g(x)) g^{\prime}(x)$ |
| 59. | Find area using left Riemann sums | $A=\operatorname{base}\left[x_{0}+x_{1}+x_{2}+\ldots+x_{n-1}\right]$ <br> Note: sketch a number line to visualize |
| 60. | Find area using right Riemann sums | $A=\operatorname{base}\left[x_{1}+x_{2}+x_{3}+\ldots+x_{n}\right]$ <br> Note: sketch a number line to visualize |
| 61. | Find area using midpoint rectangles | Typically done with a table of values. Be sure to use only values that are given. If you are given 6 sets of points, you can only do 3 midpoint rectangles. <br> Note: sketch a number line to visualize |
| 62. | Find area using trapezoids | $A=\frac{\text { base }}{2}\left[x_{0}+2 x_{1}+2 x_{2}+\ldots+2 x_{n-1}+x_{n}\right]$ <br> This formula only works when the base (width) is the same. Also trapezoid area is the average of LH and RH. If different widths, you have to do individual trapezoids, $A=\frac{1}{2} h\left(b_{1}+b_{2}\right)$ |
| 63. | Describe how you can tell if rectangle or trapezoid approximations over- or underestimate area. | Overestimate area: LH for decreasing; RH for increasing; and trapezoids for concave up Underestimate area: LH for increasing; RH for decreasing and trapezoids for concave down DRAW A PICTURE with 2 shapes. |
| 64. | Given $\int_{a}^{b} f(x) d x$, find $\int_{a}^{b}[f(x)+k] d x$ | $\int_{a}^{b}[f(x)+k] d x=\int_{a}^{b} f(x) d x+\int_{a}^{b} k d x=\int_{a}^{b} f(x) d x+k(b-a)$ |
| 65. | Given $\frac{d y}{d x}$, draw a slope field | Use the given points and plug them into $\frac{d y}{d x}$, drawing little lines with the indicated slopes at the points. |
| 66. | $y$ is increasing proportionally to $y$ | $\frac{d y}{d t}=k y$ translating to $y=A e^{k t}$ |
| 67. | Solve the differential equation ... | Separate the variables - $x$ on one side, $y$ on the other. The $d x$ and $d y$ must all be upstairs. Integrate each side, add C. Find C before solving for y ,[unless $\ln y$, then solve for y first and find A]. When solving for y , choose + or - (not both), solution will be a continuous function passing through the initial value. |
| 68. | Find the volume given a base bounded by $f(x)$ and $g(x)$ with $f(x)>g(x)$ and cross sections perpendicular to the $x$-axis are squares | The distance between the curves is the base of your square. So the volume is $\int_{a}^{b}(f(x)-g(x))^{2} d x$ |

| 69. | Given the value of $F(a)$ and $F^{\prime}(x)=f(x)$, find $F(b)$ | Usually, this problem contains an anti-derivative you cannot do. Utilize the fact that if $F(x)$ is the antiderivative of $f$, then $\int_{a}^{b} f(x) d x=F(b)-F(a)$. So solve for $F(b)$ using the calculator to find the definite integral, $F(b)=\int_{a}^{b} f(x) d x+F(a)$ |
| :---: | :---: | :---: |
| 70. | Meaning of $\int_{a}^{b} f(t) d t$ | The accumulation function: net (total if $f(x)$ is positive) amount of y-units for the function $f(x)$ beginning at $\mathrm{x}=\mathrm{a}$ and ending at $\mathrm{x}=\mathrm{b}$. |
| 71. | Given $v(t)$ and $s(0)$, find the greatest distance from the origin of a particle on $[a, b]$ | Solve $v(t)=0$ OR DNE. Then integrate $v(t)$ adding $s(0)$ to find $s(t)$. Finally, compare $s$ (each candidate) and s(each endpoint). Choose greatest distance (it might be negative!) |
| 72. | Given a water tank with $g$ gallons initially being filled at the rate of $F(t)$ gallons $/ \mathrm{min}$ and emptied at the rate of $E(t)$ gallons $/$ min on $[0, b]$, find <br> a) the amount of water in the tank at $m$ minutes | $g+\int_{0}^{m}(F(t)-E(t)) d t$ |
| 73. | b) the rate the water amount is changing at $m$ | $\frac{d}{d t} \int_{0}^{m}(F(t)-E(t)) d t=F(m)-E(m)$ |
| 74. | c) the time when the water is at a minimum | Solve $F(t)-E(t)=0$ to find candidates, evaluate candidates and endpoints as $x=a$ in $g+\int_{0}^{a}(F(t)-E(t)) d t$, choose the minimum value |
| 75. | Find the area between $f(x)$ and $g(x)$ with $f(x)>g(x)$ on $[a, b]$ | $A=\int_{a}^{b}[f(x)-g(x)] d x$ |
| 76. | Find the volume of the area between $f(x)$ and $g(x)$ with $f(x)>g(x)$, rotated about the $x$-axis. | $V=\pi \int_{a}^{b}\left[(f(x))^{2}-(g(x))^{2}\right] d x$ |
| 77. | Given $v(t)$ and $s(0)$, find $s(t)$ | $s(t)=\int_{0}^{t} v(x) d x+s(0)$ |
| 78. | Find the line $x=c$ that divides the area under $f(x)$ on $[a, b]$ to two equal areas | $\frac{1}{2} \int_{a}^{b} f(x) d x=\int_{a}^{c} f(x) d x$ <br> Note: this approach is usually easier to solve than $\int_{a}^{c} f(x) d x=\int_{c}^{b} f(x) d x$ |

79. Find the volume given a base bounded by $f(x)$ and $g(x)$ with $f(x)>g(x)$ and cross sections perpendicular to the $x$-axis are semi-circles

The distance between the curves is the diameter of your circle. So the volume is $\frac{1}{2} \pi \int_{a}^{b}\left(\frac{f(x)-g(x)}{2}\right)^{2} d x$
